

Leasing Management System

Fields of Application

- Processing of different leasing contract forms
- Automated invoicing
- Standardized and individual calculations for contract rates and service packages

Description

With comm.lease you have got a professional all-in-one software solution at hand – for the processing of financing and leasing contracts for any kind of vehicles and objects.

It does not matter if you offer your customers leasing, full service leasing, rental, hire-purchase or other forms of leasing contracts; the respective form of leasing contracts can be mapped easily and uncomplicated. In the same way, an entry can also be generated for the underlying object.

The entire business process is mapped in one system: from the selection and configuration of individual objects on complex calculations, contract conclusion, contract and property management to disposal of objects.

comm.lease helps you to master the velocity and complexity of today's multilayer financing and rental business with only one software solution. It also supports you in organizing your complete business processes easier and more efficiently, in designing them in a well-arranged way and in minimizing internal costs.

Our product comm.lease stands for a professional software solution for the daily routine of your leasing business. If you are a commercial client or private customer – requests for leasing, full service leasing, rental or financing can be calculated and processed quickly and individually.

comm.lease offers features that are customer and staff-oriented so that all business processes like controlling purchases and the distribution, managing objects or remarketing can be integrated into one modular system.

Benefits

- Cost transparency through comprehensive reporting possibilities
- Mapping of the entire process of the respective finance and leasing business
- Optimization of working processes through the integrated document management in form of electronic object files - direct access to all forms and evaluations throughout the system
- Processing of different financing and leasing contracts for any type of vehicles and objects
- Quicker business processes through automated operations minimizing sources of errors and labor costs

Highlights

- Calculation
- Contract Administration
- Cost Management
- Disposal of Objects
- Invoicing
- Multi-client capability
- Object Administration
- Reports and forms
- (Short-term) Rental
- Web Frontend

Features

- **Calculation**
This tool facilitates the automated calculation of contract rates and service packages. Those rates and packages can generally be defined freely and adapted to your individual, internal calculation rules. Hereby, all types of contracts such as (full-service) leasing, financing, long and short term rental, hire-purchase etc. are supported.
- **Contract Administration**
Next to classical leasing contracts comm.lease offers the mapping of a multitude of types of contracts. No matter what kind of leasing you would like to offer to your customers (leasing, financing, long and short-term rental, hire-purchase etc.) – all types and combinations can be mapped without problems.
The administration of contracts also permits the generation of quotes which are taken over automatically into contract administration after successful confirmation.
- **Cost Management**
In the cost tree all types of costs are defined and structured individually and are furnished with accounting information. The hereby generated accounting records are transferred directly to the financial accounts department.
- **Disposal of Objects**
The disposal of your objects at an early stage with regard to the subsequent recycling method not only saves you time but also money. The quicker the commercialization process is carried out the lower are the costs for financing and logistics. With comm.lease you can retrieve contracts and objects that are currently or prospectively phasing-out at any time and commercialize them at the market through a multilevel procedure.
- **Electronic Damage Claims File**
All damage-relevant information is captured and complemented in an electronic damage claims file so that focal points of damages become apparent – technical and managerial aspects and in terms of human resources.
- **(Incoming) Invoice Processing**
Next to the allocation of invoice line items onto freely definable types of costs comm.lease facilitates the capture of component or spare parts and repair processes.
- **Invoicing**
comm.lease facilitates an automated invoicing of all contracts. Hereby, not only individual customer demands such as collective or single invoices but also the pre-defined invoice layout are considered automatically.
The definition of the basic invoice parameters is carried out one time for each customer or client.
- **Object Administration**
Next to diverse kinds of objects (vehicle park with trucks or automobiles, construction machines, computer etc.) all relevant data about your customers, suppliers and service providers can be managed with comm.lease without problems and pooled in a client-oriented way.
- **Reports and Forms**
With a variety of standard reports comm.lease offers a wide range of current and professional evaluations.
- **(Short-term) Rental**
In-house disposition as well as the rental of your vehicles can be mapped by this module. comm.lease offers you a detailed overview over all vehicles available, all reservations, all bookings, all pickups, all returns and also all cancellations.
- **Web Frontend**
With a web-based vehicle configurator vehicles can be set up individually. The configuration of special equipment is carried out by a wizard-guided tool checking the vehicle composition on availability and plausibility.

Company Details

Our core competences:

Software development
of standard products and special solutions based on our own integration platform open-EIS in the fields of Fleet Management, Trade Fair Management, Document and Content Management, Teamwork and Knowledge Management as well as Education and eLearning.

open-EIS
community4you's unique feature is an integration platform with enterprise technology, based on a service-oriented architecture (SOA) for the flexible adaptation and extension of complex business processes through integrated mechanisms.

Networks
are an important factor of success. For this reason, we work together with many partners who support our business activities with their solutions.
