

Learning Management System

Fields of Application

- Advanced vocational training for employees
- Training for products, machines and software
- Training for partners and clients

Description

Learning is an important part of daily working life. In-house processes and operation methods as well as the handling of machines and software systems have to be learned. At the same time, individual qualification steered by one's own initiative gains importance.

In-class lectures are cost and time intensive and mostly do not provide an opportunity for permanent and individual training. Moreover, co-workers are not always trained when they are motivated and receptive. Knowledge is being forgotten quickly because there is a lack of possibilities for repetition and practice.

For this reason in-class lectures are now frequently replaced respectively supported by computer based trainings. Next to cost savings, online training offers the possibility to adapt learning content to individual needs; so that everyone learns exactly what he needs to fulfill his tasks. Every student is enabled to learn by own initiative, at a point of time where he is motivated and absorptive.

Our learning management system comm.lms offers you an integrated WYSIWYG authoring system, a question editor with a tool for the assortment of question types, a configurator and a Content Delivery System for a quicker and easier allocation of training scenarios. In addition, the system offers of a graphical surface which can be handled easily. It contains all functions for the administration of users, learning modules, courses and exams as well as for the statistical assessment.

Benefits

- Content permanently up-to-date
- Continuous web-based Internet access
- Cost and time saving
- Customized qualification
- Individual pace of learning
- Location independent
- Self-directed learning
- Training on demand

Highlights

- Integration of numerous communication tools
- Individual configuration of learning objects with learn paths
- Personalized evaluation with extensive reporting tools
- Publication of learning modules in a CI-specific Content Delivery System (learning platform)
- Rapid content development
- Simple generation of learning objects (content, tests, exams)

Features

- **Administration of Learners**
Manage students and groups and design individual learning paths in order to train every employee, client or partner; adapted specifically to their learning needs.
